

# ABS STACKABLE AND INDESTRUCTIBLE TOOL CASES

EGA Master ABS stackable and indestructible tool cases provide the professional user with the ideal solution for equipment storage and transportation. Made from Extra Resistant "ABS" materials each tool case is solid, extra-shockproof and virtually indestructible. The dimensions of the Tool Cases allow for the handling of lengthy equipment and tools such as spirit levels, hacksaws...

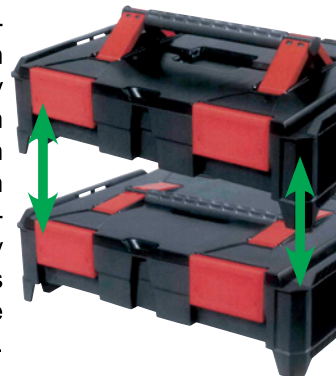

**1. SELF BALANCING:** The sliding 8-point fastening system of the handle allows for an even distribution of the load inside each box, creating a self-balancing feature which enables better handling and comfort during transportation.

**2. SOLID AND INDESTRUCTIBLE:** Achieving optimum results in both crash and stress tests. The use of ABS shockproof materials makes the cases very versatile. Each case is fully sealed to provide total protection from rain and moisture, with the specially designed channels effectively guiding water off the lids of the cases.

**3. STACKABLE:** The Tool Cases incorporate an Automatic Self-Stacking System with sprung clamps securely locking cases together when they are placed on top of each other. These tool cases can be stacked in multiple combinations, and the specially designed supporting legs guide each case into the correct position for stacking.
